Weaving Information Into Knowledge

FAME ENERGY & SUSTAINABILITY MODULE

In 2007, British Columbia set an ambitious goal to reduce the Province's greenhouse gas (GHG) emissions by 33% by 2020. The Government committed to make its own operations "carbon neutral" beginning in 2010. This commitment applies to all Public Service Organizations (PSOs) which include crown corporations, health authorities, boards of education and post-secondary institutions. In addition, Local Governments from across BC have joined with the Province to voluntarily pledge to become carbon neutral in 2012. Each agency is required to measure and report on its GHG emissions via the BC SMARTTool.

FAME has been selected by the BC Government as a **pre-qualified utility data management software vendor** offering PSOs and Local Government Agencies the best value in both performance and pricing. Now, PSO's and Local Governments can easily and automatically report on Provincial GHG mandates while proactively managing energy consumption.

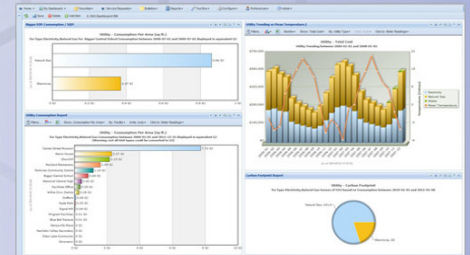

THE ENERGY & SUSTAINABILITY MODULE WILL ALLOW YOU TO:

- Measure the efficiency of your assets;
- Easily track energy consumption over time;
- Quickly, accurately and with full graphic functionality utilize standard reports or create custom reports to meet management reporting requirements;
- Automatically calculate your greenhouse gas emissions and the carbon footprint of your assets;
- Budget accurately and prepare long range energy forecasts;
- Trend utility consumption versus outdoor temperature, allowing year-by-year comparison and analysis;
- Compare and benchmark the utility intensity of individual buildings or a group of buildings;
- Automatically convert different utility types into equivalent units of energy (i.e. ekWh, eGJ) to allow different utilities to be added and analyzed together;
- Track the energy impact of a major renovation and/or addition project;
- Rapidly upload utility data via the spreadsheet import feature;
- Automatic error reporting and Activity Log tracking;
- Integrate with the **BC SMARTTool**, the web-based application provided by Shared Services BC to report on greenhouse gas emissions.

"At Interior Health we have chosen the FAME Software for our energy management needs. We selected FAME due to its cost-effective solutions and the robust functionality it offers in a visually appealing easy to use platform. We are also impressed with the customizable dashboard views and exceptional reporting features it offers."
